

Esther Melia Caroline S

Software Developer · Security & Fraud Research

Jakarta, Indonesia · +62 853 6852 0548 · esthermelia20@gmail.com · linkedin.com/in/esther-melia-cs

PROFESSIONAL SUMMARY

Software Developer with 2+ years of experience building and maintaining secure authentication and fraud prevention systems. Proficient in Go and JavaScript with hands-on experience developing OTP infrastructure, mobile security SDKs, and network authentication systems in a fast-paced fintech environment. Solid foundation in microservices, RESTful APIs, and production monitoring, with additional exposure to security research and fraud pattern analysis through an R&D role. Adaptable, curious, and committed to writing clean, reliable code that solves real problems.

PROFESSIONAL EXPERIENCE

Software Developer | Fazpass

November 2024 – Present

Fazpass — Indonesia's leading OTP authentication and fraud prevention platform (OTP aggregation, FNA network authentication, Key paz mobile security SDK).

- Develop and maintain OTP-based authentication systems and aggregator infrastructure in Go, with frontend work in JavaScript and Vue.js, ensuring high availability, scalability, and fault-tolerant delivery across multiple channels.
- Collaborate with cross-functional teams to design, develop, and implement secure authentication and fraud prevention solutions across multiple merchant integrations.
- Contribute to the development of Key paz, a mobile security SDK — implementing device integrity checks and security signal detection to identify compromised or suspicious devices.
- Contribute to FNA (Fazpass Network Authentication) — building seamless authentication logic and fallback flows based on user trust scoring across the Fazpass merchant network.
- Analyze and address security vulnerabilities in authentication workflows to protect sensitive user data and ensure system reliability.
- Implement automated tests to maintain system reliability and minimize security risks across microservices.
- Monitor and troubleshoot production environments, ensuring rapid resolution of issues and minimal downtime during security incidents.
- As part of the R&D division, research emerging fraud patterns and attack vectors — using findings to inform product and detection improvements.

Software Developer | PotatoBeans Company

October 2023 – November 2024

IT solution provider focused on enterprise digital transformation.

- Built and maintained backend services in Go and frontend in Dart across multiple client products, including an internal quality assurance system for Institut Teknologi Bandung (ITB) and a multi-tier game voucher platform.
- Improved API response time and ensured data consistency across highly relational datasets for ITB's SPMI system — a multi-database cloud infrastructure handling institutional quality data.
- Refactored the game voucher platform's core system to accommodate a changed business model, and resolved a critical payment failure bug caused by a vendor integration issue.
- Contributed to the successful launch of a reseller sub-platform, enabling resellers to independently create and customize their own game voucher storefronts.
- Maintained and updated an internal shared library covering authentication and CI/CD tooling, used across multiple internal and client-facing services.

Software Developer Intern | PotatoBeans Company

August 2023 – October 2023

- Contributed production code to live systems in Go and Dart alongside senior engineers — actively involved in system development rather than observational tasks.
- Contributed to the design and architecture of new features and system improvements, participating in technical discussions beyond just implementation tasks.

- Participated in code reviews — providing and receiving constructive feedback to improve code quality and personal development.

Coding Teacher | [Coding Bee Academy](#)

August 2021 – August 2023

- Planned, prepared, and delivered coding lessons to students aged 5–18 across varying skill levels and learning backgrounds.
- Taught fundamental programming concepts, languages, and technologies including Python, JavaScript, HTML/CSS, Lua, C#, and React Native.
- Adapted teaching methods and materials to accommodate diverse learning styles and individual student needs.
- Provided constructive feedback and guidance to students on their coding projects and assignments, supporting measurable skill progression.

EDUCATION

Bachelor's Degree — Mathematics Education

GPA: 3.59 / 4.00

[State University of Medan, Indonesia](#)

TECHNICAL SKILLS

Languages	Go (Golang), Dart, Python, JavaScript, HTML/CSS, C#, Lua
Frameworks	Gorilla Mux, Vue.js, React Native, Node.js
Security & R&D	Frida (dynamic instrumentation), fraud pattern analysis, mobile security research, OTP system security, device fingerprinting
Infrastructure	Docker, Nomad, Linux system administration, Git
Development	RESTful APIs, Microservices, SQL, unit & integration testing
Soft Skills	Problem solving, cross-functional collaboration, technical communication
